

## **Elections to Council Nucleus and Nominating committee 2024-2026**

### Motivation letter: What would you do if successfully elected?

#### **Application for the ESC Council on Stroke Chair-Elect**

The core rationale behind my application for the position of chairperson-elect is to use my existing skills and past experience as a Nucleus member of the ESC Council on Stroke to assist the Council to evolve in the following areas in line with the ESC strategic plan:

- Promotion of interdisciplinary collaboration and synergies between different specialties involved in stroke care within the ESC family and across medical disciplines.
- Use my network established as the current liaison officer for exchange with our related societies such as the European Stroke Organisation, American Stroke Association, World Stroke Organization and national societies.
- Facilitate evidence generation to support position papers, future guidelines and advocacy.
- Advocate for equity and the fair distribution of access to training and research in the highly interdisciplinary field of stroke, in particular in countries with limited opportunities.

My background is interventional cardiology with a focus on coronary interventions and structural heart disease. In research I work with clinical and population cohorts and lead national and EU-funded international consortia (e.g. AFFECT-EU ([affect-eu.eu](http://affect-eu.eu))). My main interest is in digital cardiology, atrial fibrillation, heart failure, and omics for risk assessment in stroke.

As an interventional cardiologist and researcher a major goal for me will be to bridge the gap between clinical and scientific specialties and perspectives in stroke care. A major asset will be the international ESC Heart & Stroke conference that will provide visibility to the Council and foster interdisciplinary cooperation.

I will help guide the Council on Stroke into a bright future for the benefit of cardiovascular medicine in the field of cardiology and stroke and to serve our patients to reduce the burden of stroke-related morbidity.
