

How can we improve quality of care

Optimizing individual clinical care

Evidence-based ESC Guidelines

Optimizing individual clinical care

- **We should base all our therapy on Guidelines**
 - But leave room for individual adjustments
- **Listen to Professor Salim Yusuf**
 - Avoid too much polypharmacy (and delete unnecessary/DDI)
- **Patient engagement**
 - To improve adherence to therapy (prevention vs treatment)
 - Patient values and preferences
 - More time with each patient
 - AI, devices and telemedicine
 - Do not leave the responsibility on the individual patient
- **More NCS involvement**
 - We are dealing with 'culture'
 - Involve NCS Reviewer of guidelines in local implementation
