# CRT summary of day 1

Susanna Price

11 June, 2024

### **Existing initiatives: learning from others**

The art of implementing guidelines on lipid management

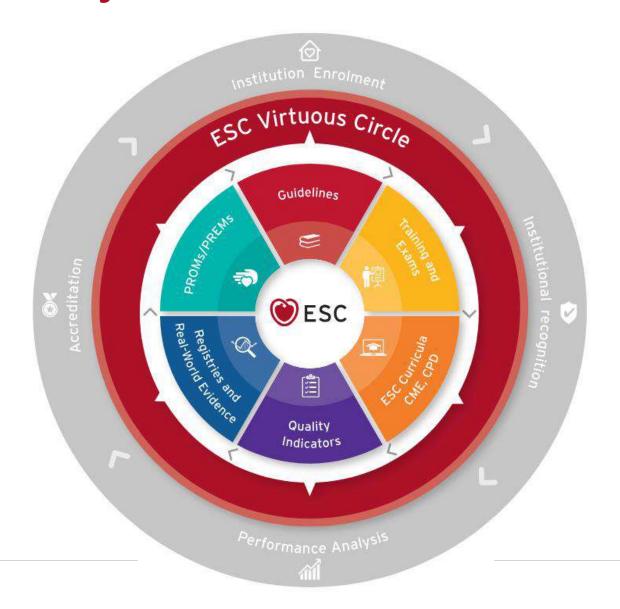

Lessons from the European Bone Marrow Transplant initiative

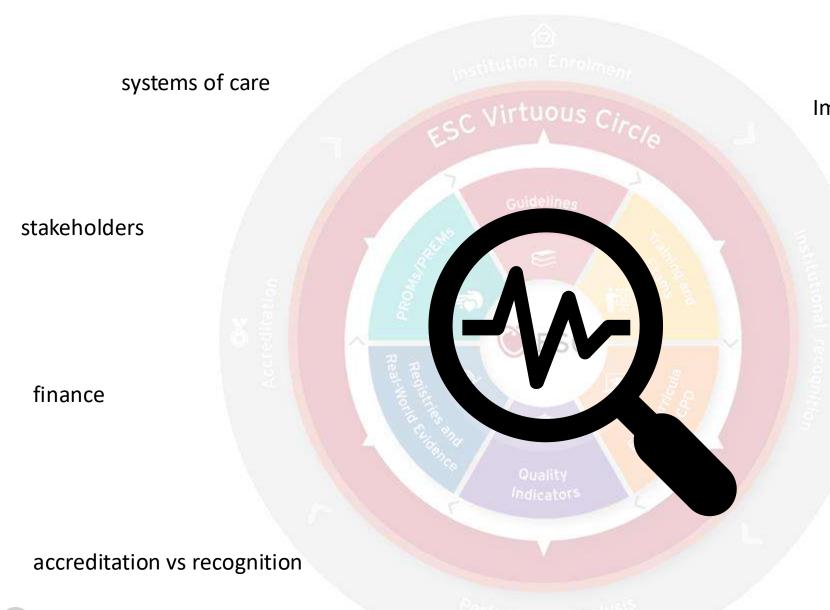

Accreditation of centres: the French experience

# The ESC: some major relevant assets

Implementation science

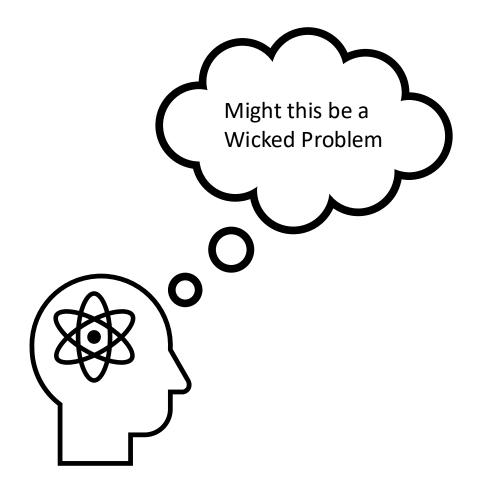

maximum impact?

what does success look like

multifactorial, complex

devices vs drugs

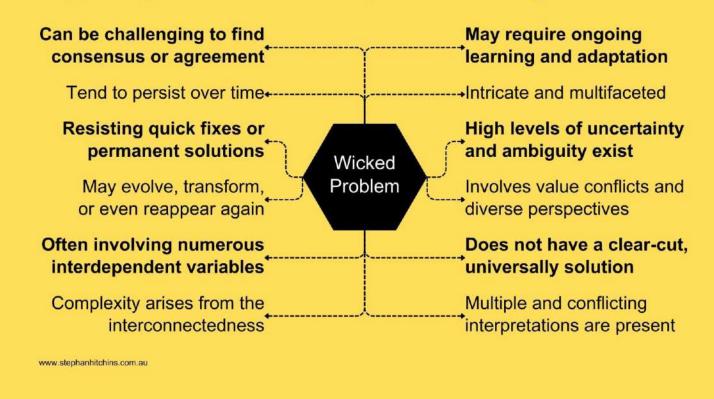

#### What is a Wicked Problem?

Typically characterized by the following attributes.

Often appear immune to conventional linear or logical 'solutions' that fail to transcend organisational cultures

There are no right or wrong solutions – just better or worse, good or bad

## **Tackling Wicked problems**

- Accept some don't have solutions may mitigate rather than solve
- Adopt 'clumsy solutions' that can sometimes appear counterintuitive
- 'This means we need leaders to support 'experiments', accept errors, and understand that the leadership role is to ask the right questions and mobilise the collective into action, rather than provide all the answers'

'Between the idea and the reality, between the notion and the act falls the shadow'

TS Eliot, The Hollow Men, 1925
